

CLAUDE CODE

5 skills that actually ship things.

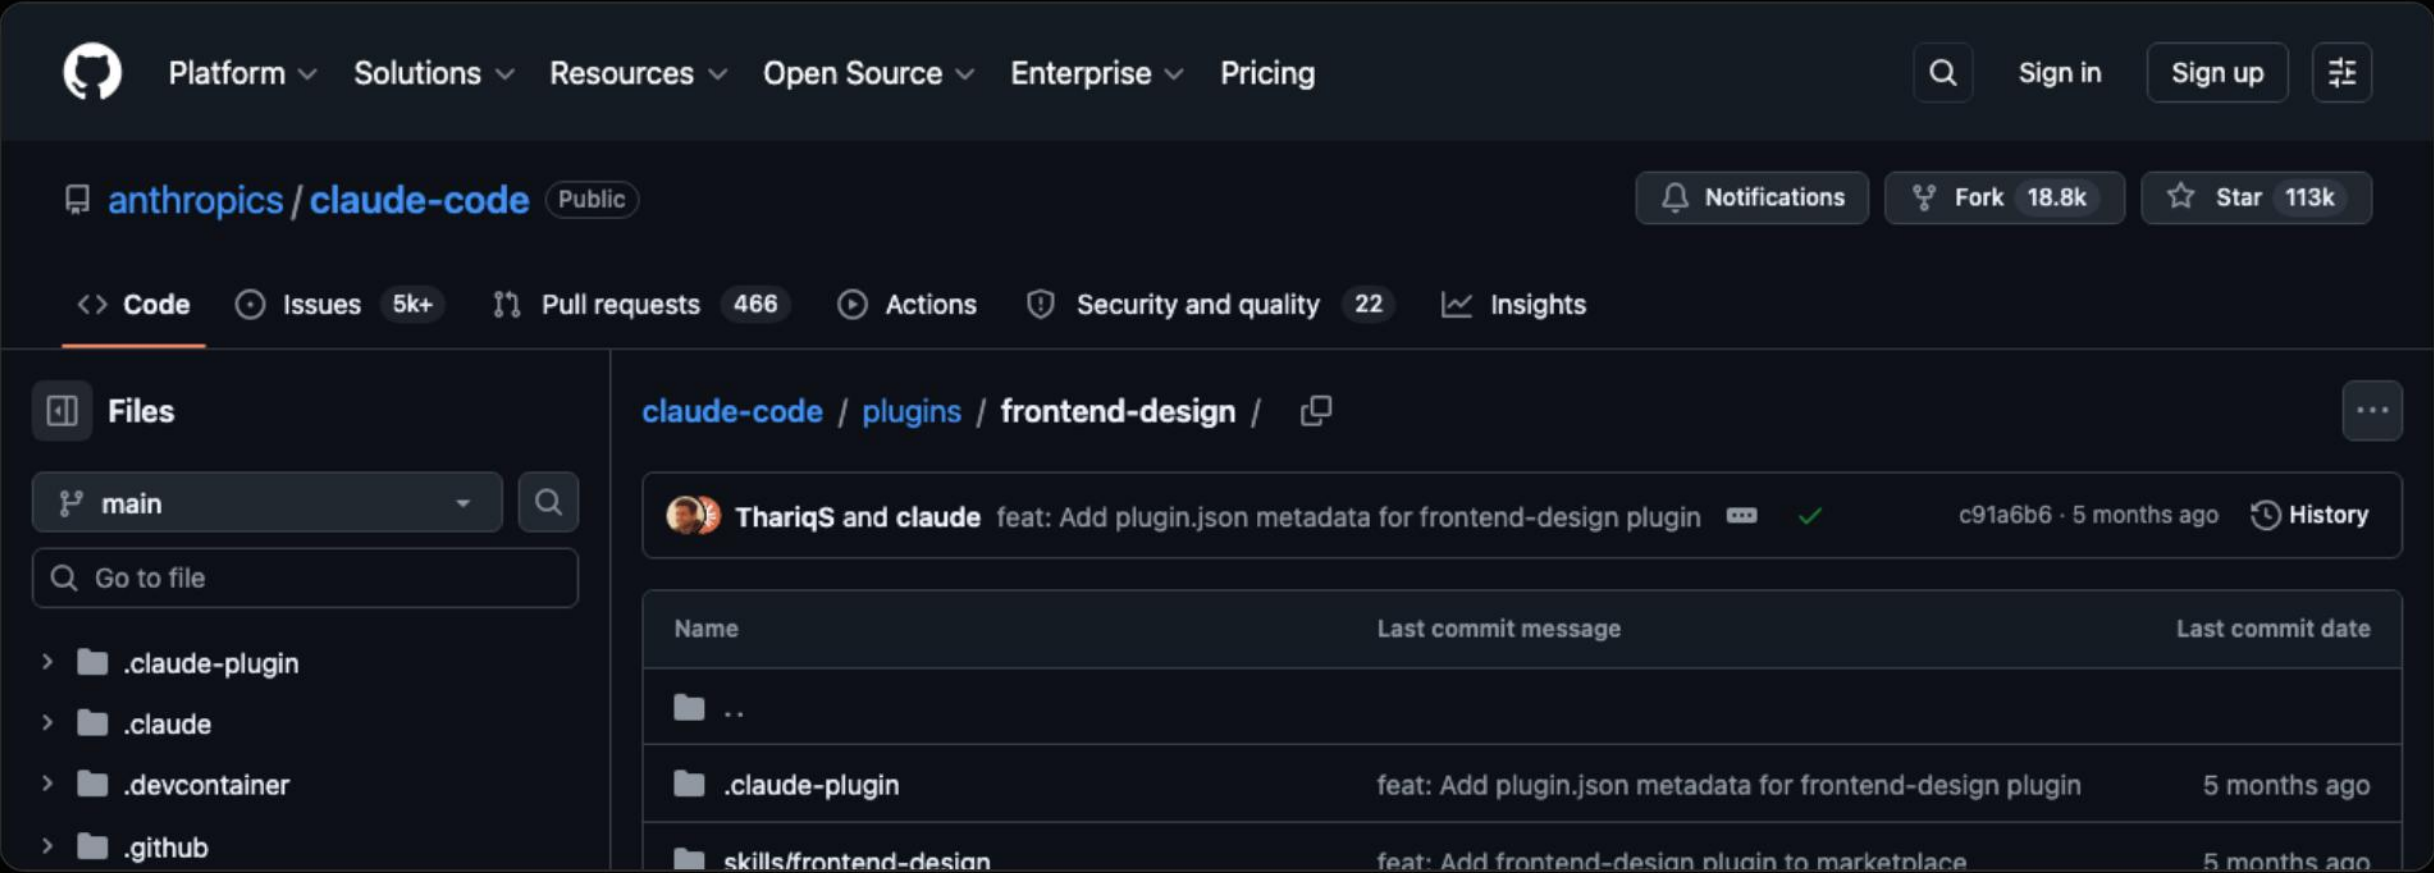

All free. All from Anthropic or verified community devs. The stack I run on every project.

```
/plugin install frontend-design
```

Frontend Design.

Auto-invoked skill for all frontend work. Bold aesthetic choices, real typography, no generic AI-looking UIs.

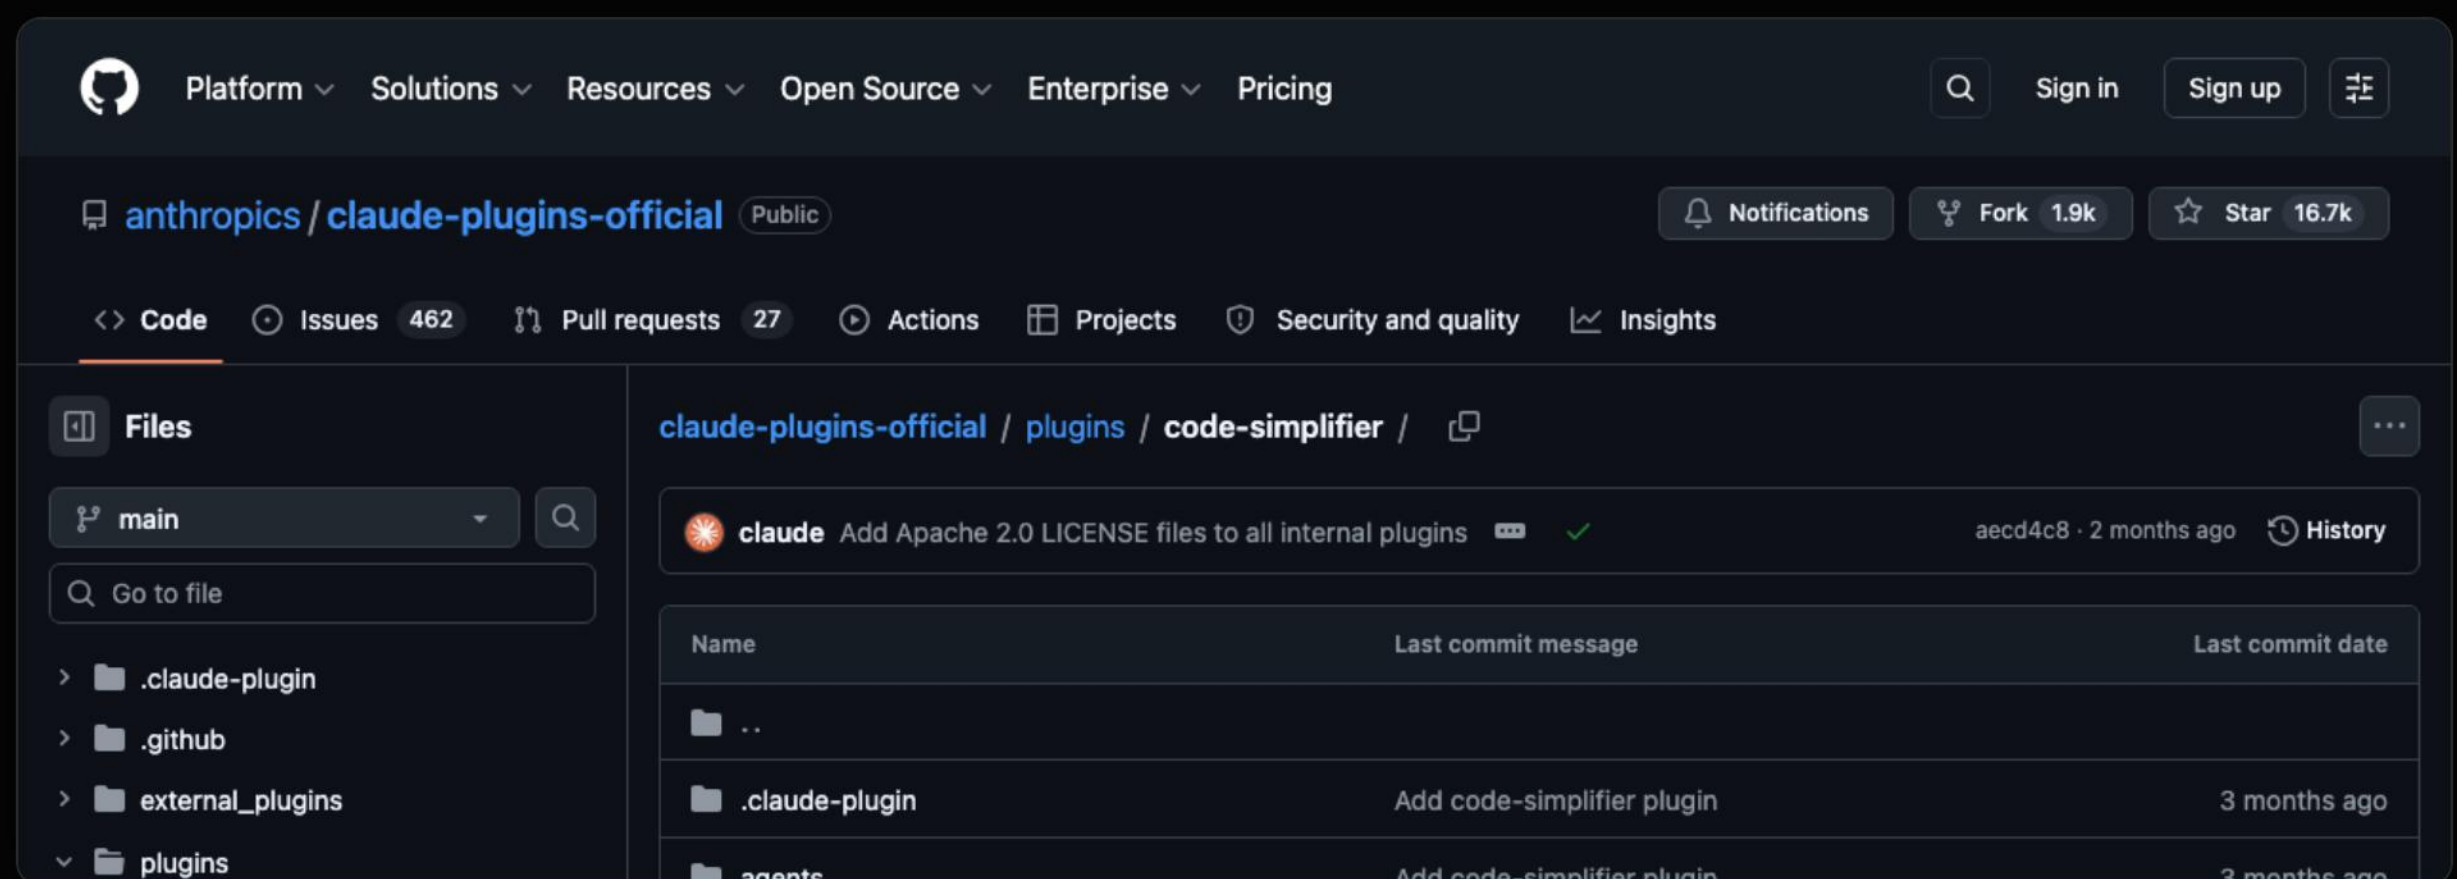

github.com/anthropics/claude-code/plugins/frontend-design

```
/plugin install code-simplifier
```

Code Simplifier.

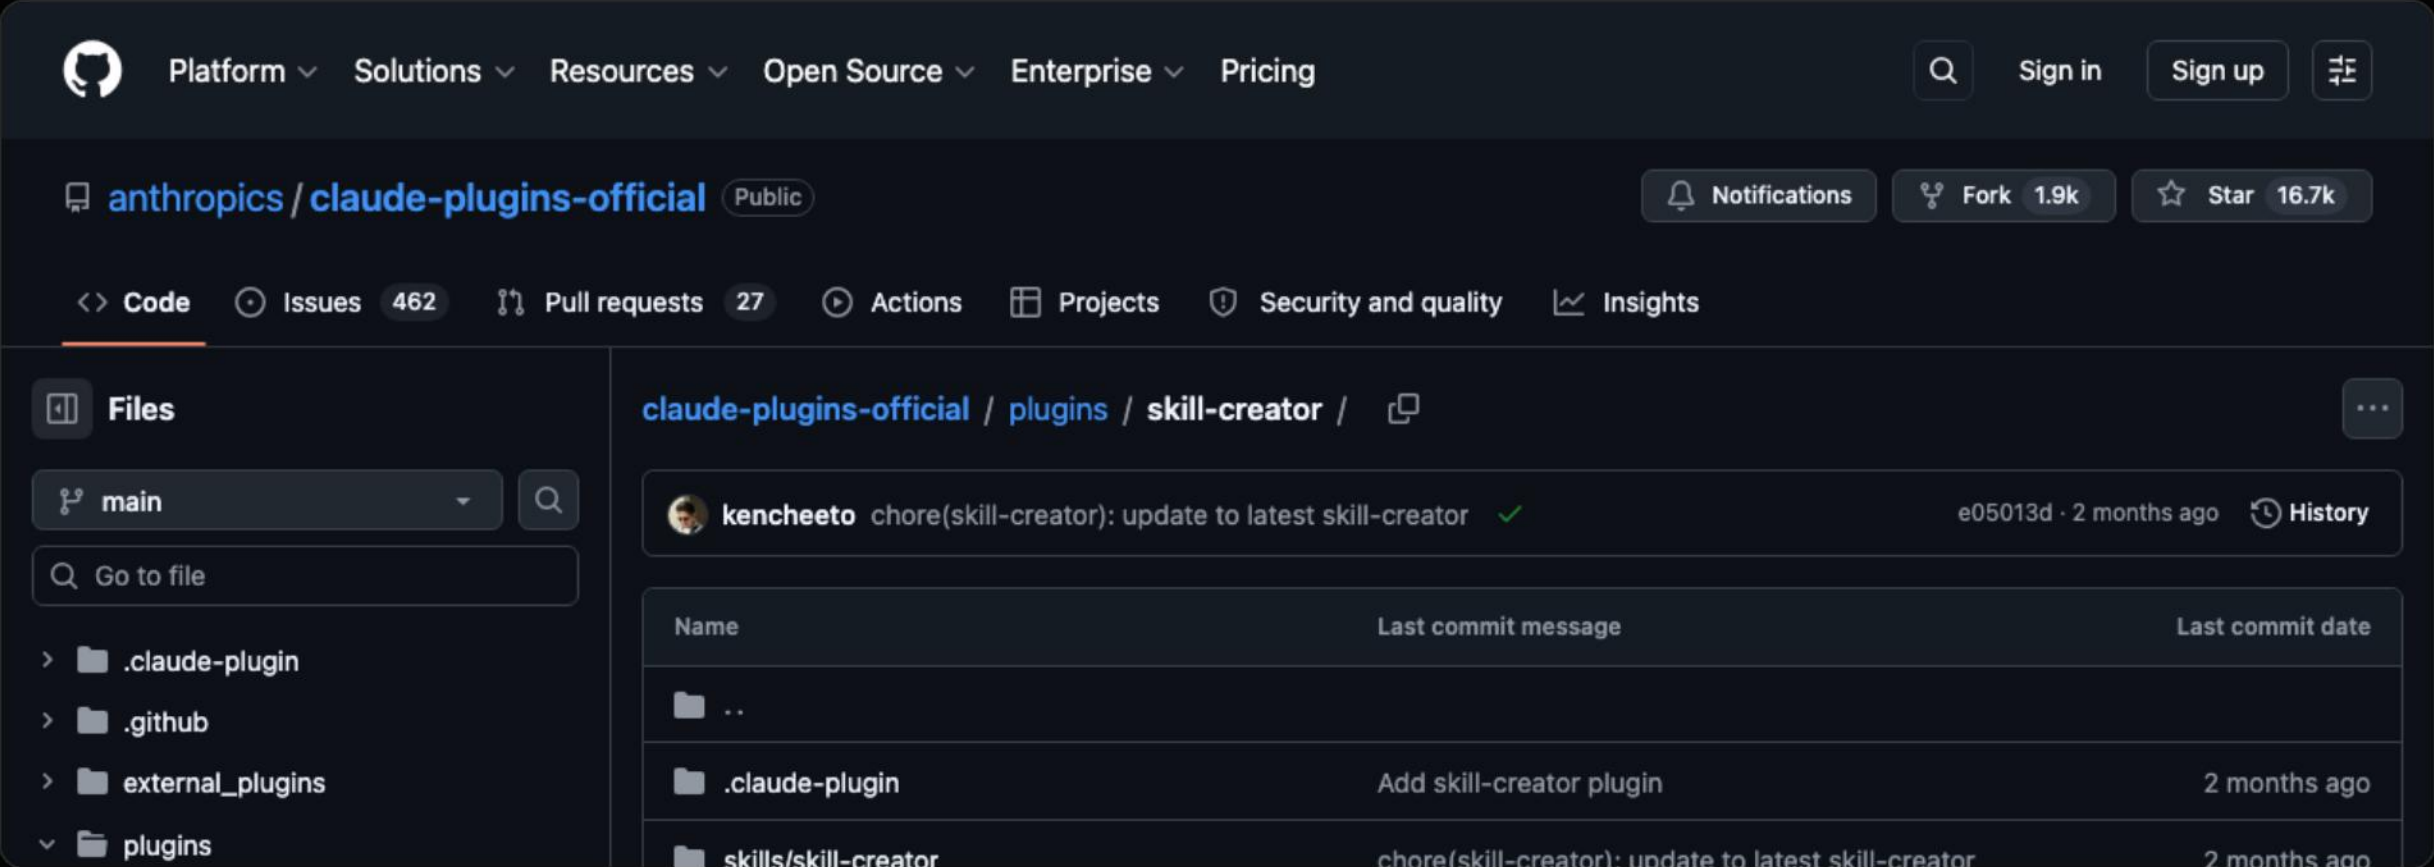

`github.com/anthropics/claude-plugins-official/plugins/code-simplifier`

Reduces complexity, removes redundancy, preserves functionality. Run after code works but feels messy.

```
/plugin install skill-creator
```

Skill Creator.

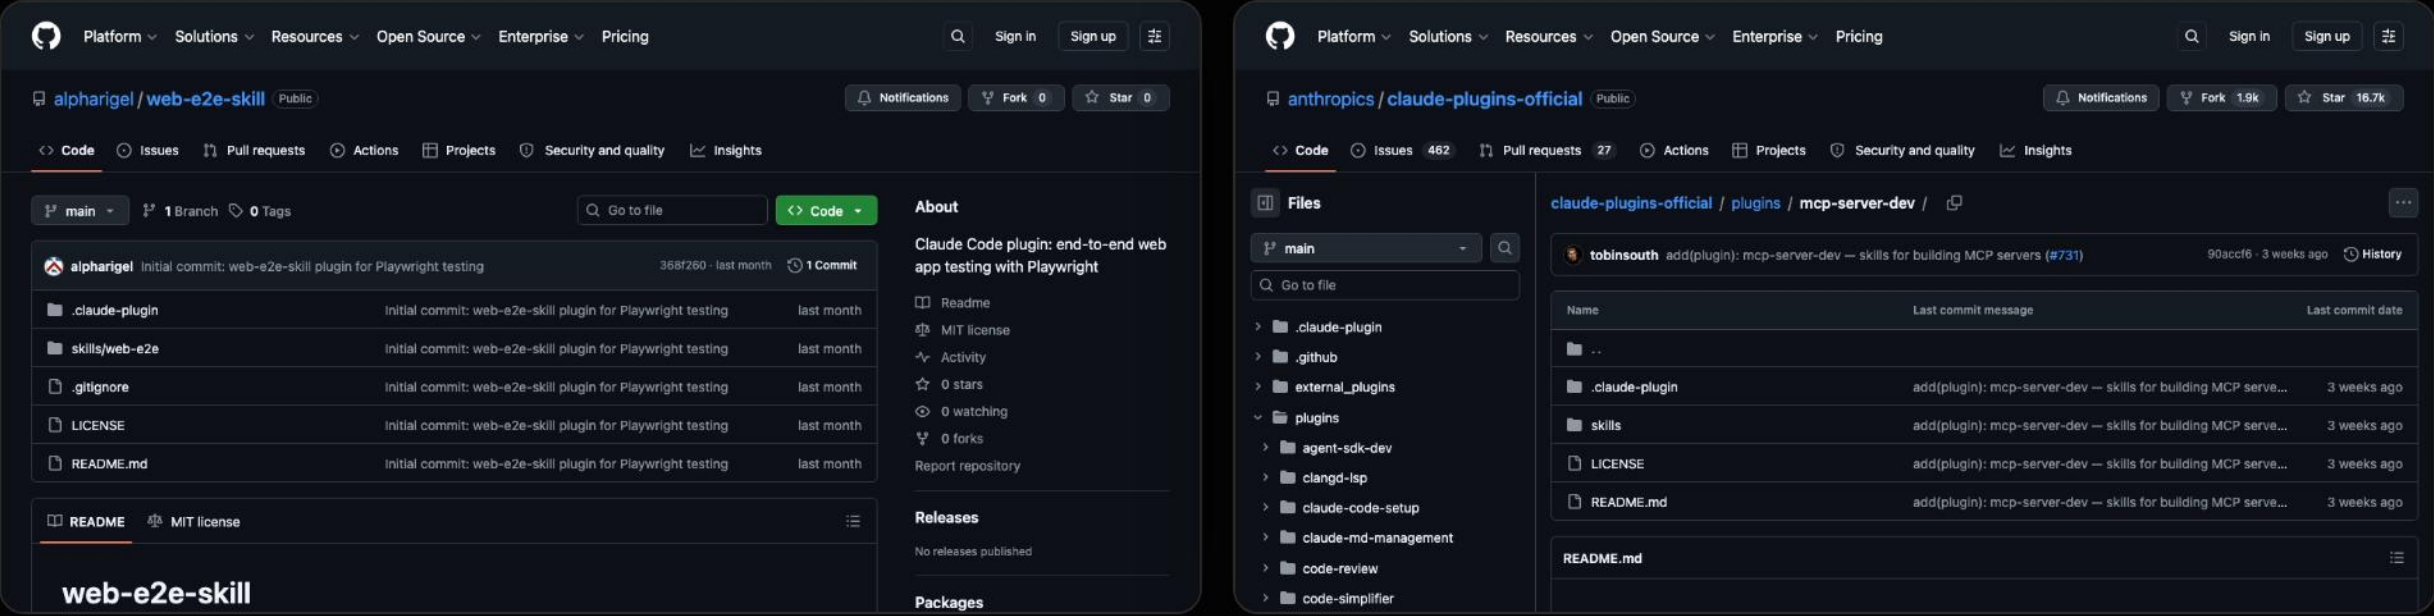

github.com/anthropics/claude-plugins-official/plugins/skill-creator

Describe any workflow. It builds the skill — with eval included so you can measure whether changes work.

SKILLS 04 + 05

```
claude plugin install alfarigel/web-e2e-skill
/plugin install mcp-server-dev
```

Web testing: Claude writes and runs Playwright tests.
MCP builder: connect Claude to any API with a guided build flow.

THE PATTERN

Better defaults.
Same **time**.

- 1 Set up once — pays back on every project
- 2 All 5 free, all from Anthropic or verified devs
- 3 Install via /plugin or claude plugin install

What's in your stack?

Drop what you're running in the comments. Always looking for tools I'm missing.
